

Kidney transplantation, rejection prophylaxis

Adults:

→ *Oral: Initial:* 0.75 mg twice daily (in combination with basiliximab induction, cyclosporine [reduced dose required] and a corticosteroid); adjust maintenance dose if needed at a 4- to 5-day interval (from prior dose adjustment) based on serum concentrations, tolerability, and response.

- If trough is <3 ng/mL: Double total daily dose (using available tablet strengths)
- If trough >8 ng/mL on 2 consecutive measures: Decrease dose by 0.25 mg twice daily.^[1]
