

Renal Impairment Doses

Adults:

→ *Renal Impairment:*

Nephrotic syndrome:

Initial: 2.5 mg/kg daily. Serum creatinine levels >30% above pre-treatment levels: Take another sample within 2 weeks; if the level remains >30% above pre-treatment levels, decrease dosage of cyclosporine by 25% to 50%.

Pediatrics:

→ *Renal Impairment:*

There is no specific recommendations in paediatric patients; serum levels should be monitored, and dose adjusted for increase in serum creatinine. ^[1]
